 WhatsApp Trigger	AUTOPILOT
 Blog Post	Working Process The FINANCIAL AUTOPILOT assessment begins with users entering key financial data (monthly income, expenses, current savings, debt, and years until retirement). A risk-tolerance slider and an “Automate Investments” toggle let users customize their profile. The platform then runs its built-in logic to calculate a savings rate, suggest an investment allocation, and determine a retirement contribution plan. Results are generated instantly, producing a personalized PDF pack that includes a hero summary, an action plan, a checklist, and exportable reports. Expected Results - A clear picture of your monthly savings rate. - An optimal investment allocation based on your risk tolerance.

- A tailored retirement contribution recommendation.
- A downloadable PDF “My Financial Autopilot Setup Pack” with a step-by-step action plan, checklist, and historical comparison tools.
- Ongoing insights that update in real time as you adjust inputs.

Timeframe for Completion

The entire assessment typically takes 5–10 minutes to complete. Once the inputs are submitted, the results are generated instantly, and the PDF pack can be downloaded within seconds.

Target Audience

- Individuals planning for retirement or looking to improve their savings.
- Young professionals who want a simple, automated way to manage budgeting and investing.
- Anyone seeking a personalized financial roadmap without hiring a financial advisor.

Usage Instructions

1. Open the FINANCIAL AUTOPILOT page.
2. Fill in the five input fields (monthly income, expenses, savings, debt, years to retirement).
3. Adjust the risk-tolerance slider (1 = low, 5 = high).
4. Toggle “Automate Investments” on or off depending on your preference.
5. Click **Get via WhatsApp** to receive the generated PDF pack or download it directly from the results screen.
6. Follow the action plan and checklist to implement the recommendations.

Customer Benefits

- Immediate, data-driven financial insights without manual calculations.
- A customized, easy-to-follow roadmap that aligns with personal risk preferences.
- Automation of investment actions, saving time and reducing errors.
- Access to a free core set of modules (heroResult, actionPlan) with the option to upgrade for additional features.

	- Ongoing ability to compare current performance with historical data, helping users stay on track toward their financial goals.
