≡ WhatsApp Trigger	BIOMETRIC
≡ Blog Post	Working Process The assessment begins with the user entering personal metrics (weight, activity level, caffeine and alcohol intake, ambient temperature, humidity, and optional sleep and HRV data) into an intuitive form. The system instantly processes these inputs using

a built-in formula to calculate the individual's daily hydration needs. Results are displayed in liters, and users can set reminder intervals to receive timely prompts to drink water throughout the day.

Expected Results

After completing the assessment, users receive a personalized hydration target expressed in liters per day, along with a clear visual of how each factor (weight, activity, caffeine, etc.) influences the recommendation. They also get the option to configure reminder frequencies, helping them stay on track. The feedback helps users understand the relationship between lifestyle variables and optimal water intake.

Timeframe for Completion

The entire process typically takes 2–5 minutes: a few seconds to input the data, an instant calculation of hydration needs, and a brief moment to set reminder preferences.

Target Audience

- Professionals and students seeking to boost cognitive performance.
- Athletes or fitness enthusiasts who need precise fluid management.
- Anyone with a busy lifestyle who wants a simple, science-backed way to stay hydrated.
- Health-conscious individuals interested in how sleep, caffeine, and environment affect hydration.

Usage Instructions

1. Open the BIOMETRIC STATE TRACKER.
2. Enter your weight (kg).
3. Select your activity level (1-5).
4. Input daily caffeine (mg) and alcohol (units) consumption.
5. Provide the current temperature (°C) and humidity (%).
6. (Optional) Add sleep hours and HRV if available.

	7. The tracker automatically calculates your daily hydration needs (L). 8. Choose a reminder frequency (15-120 minutes) and activate notifications. 9. Follow the reminders and adjust intake as needed throughout the day. Customer Benefits - Personalized Hydration: Tailored water-intake goals that adapt to daily habits and environmental conditions. - Improved Focus & Energy: Optimized fluid balance supports cognitive function and physical stamina. - Convenient Reminders: Automated alerts help maintain consistent hydration without manual tracking. - Data-Driven Insights: Understand how lifestyle factors influence water needs, empowering smarter health decisions. - Easy Integration: Simple form and instant results fit seamlessly into any routine, whether at work, school, or the gym.

≡ Summary	Discover Your Perfect Hydration Formula Introducing the BIOMETRIC STATE TRACKER – a smart, personalized tool designed to fine-tune your daily water intake for optimal cognitive and physical performance. By simply entering a few key metrics—your weight, activity level, caffeine and alcohol consumption, ambient temperature, humidity, and optional sleep and HRV data—the tracker instantly calculates the exact amount of water you need each day. Why try it?

	- Tailored hydration that adapts to your lifestyle and environment. - Easy-to-use interface with sliders and number fields for quick data entry. - Instant results displayed in liters, so you know exactly how much to drink. - Custom reminders let you set notification intervals that fit your routine. Take control of your well-being with a science-backed, hassle-free solution. Give the BIOMETRIC STATE TRACKER a try today and feel the difference in focus, energy, and overall health.
